## Section 2

The COST Action InterCoML (CA24136) aims to ...

- 1 strengthen the control-theoretical foundations of ML methods,
- 2 leverage modern ML tools to tackle complex and high-dimensional CT problems,
- 3 develop hybrid and data-driven models for highly complex application scenarios,
- 4 transform theoretical results into software solutions and practical implementations in industry and society,
- 5 disseminate insights and findings generated within the Action to the research community and the general public.

# Introduction to the COST Action InterCoML

The COST Action InterCoML (CA24136) aims to ...

- 1 strengthen the control-theoretical foundations of ML methods,
- 2 leverage modern ML tools to tackle complex and high-dimensional CT problems,
- 3 develop hybrid and data-driven models for highly complex application scenarios,
- 4 transform theoretical results into software solutions and practical implementations in industry and society,
- 5 disseminate insights and findings generated within the Action to the research community and the general public.

The Action will *combine different approaches*, creating synergies that will benefit both sides, and leading to progress in both theoretical investigations and applications.

# Another frame

Again with a subtitle

A nice **filled** box

And here a box with **just the outline**

# Headline of a plain frame

Smaller description

**Or a plain frame without subtitle**
